

IT / Technical Project Manager Interview Question Bank

Rupesh Kumar · Questions to practise for project, programme and technical PM interviews (infrastructure & IT)

Delivery & planning

- ☐ Walk me through how you plan a multi-site infrastructure rollout from kickoff to handover.
- ☐ How do you build and maintain a dependency map? Give an example where it saved a deadline.
- ☐ Tell me about a project that slipped. What did you see early, and what did you do?
- ☐ How do you decide between Agile, waterfall or hybrid for an infrastructure project?

Risk, RAID & governance

- ☐ How do you write a useful risk? Give an example from your experience.
- ☐ When and how do you escalate to a steering committee?
- ☐ Describe your weekly governance cadence and the reports you produce.
- ☐ How do you report a 'red' status to senior stakeholders without losing their confidence?

Stakeholders & vendors

- ☐ Tell me about a difficult stakeholder and how you handled them.
- ☐ How do you manage a vendor that is consistently late?
- ☐ How do you keep engineering teams motivated during a long programme?

Technical understanding

- ☐ Explain the difference between MPLS and SD-WAN to a non-technical stakeholder.
- ☐ What goes into a rollback plan for a firewall or core switch replacement?
- ☐ What are the main risks in a data-centre migration and how do you mitigate them?
- ☐ How would you approach a vulnerability-remediation programme across thousands of devices?

Commercials & outcomes

- ☐ How do you track budget versus forecast and explain variance?
- ☐ Tell me about a time you reduced cost or timeline. How did you measure it?
- ☐ How do you build a business case for a technology investment?

Tips

- ☐ Prepare 6–8 STAR stories covering delivery, risk, conflict, failure, leadership and cost.
- ☐ Quantify scope (sites, devices, users, budget) — and only use numbers you can defend.

End each answer with the outcome and what you learned.
